to the applicant: **PŘÍHODA s.r.o., Za Radnicí 476, 539 01 Hlinsko v Čechách, Czech Republic**

TESTIMONIAL

No.: 15 – 185

This testimonial confirms that the product:

fabric PMI (fabric with antibacterial treatment)

- **new fabric**

- **fabric after 10 cycles of washing 40°C**

Material composition: 100% polyester

Colour: white, mass per unit area 220 g.m⁻², thickness 0,30 mm

complies with the requirements of:

- **EN ISO 20645 Textile fabrics – Determination of antibacterial activity – Agar diffusion plate test** regarding to antibacterial effect of the antibacterial treatment – Article 10, Table No.1 (*new fabric*)
- **EN ISO 20743 Textiles – EN ISO 20645 Textile fabrics – Determination of antibacterial activity of textile products** regarding to antibacterial activity of the antibacterial treatment – Annex F, Table F.1 (*fabric after 10 cycles of washing 40°C*)

Based upon the acquired level of antibacterial activity it has been proved that the assessed sample produces good antibacterial efficiency – strong antibacterial activity.

**Good antibacterial efficiency was detected on new PMI fabric
and on PMI fabric after 10 cycles of washing 40°C.**

This testimonial has been issued on the basis of the application No. COV/15/284 from 29.10.2015. The base for this testimonial is the test protocol No. AZL 15/1023-06 from 05.11.2015 and No. AZL 15/1023-02 from 26.10.2015, issued by the accredited test laboratory of TZÚ Brno. Detailed conditions of testing have been specified in the test protocols.

Validity up to: 30.11.2017

Testimonial was issued: Brno, 23.11.2015

Issued by:

Annex No.1

Assessed parameters – **fabric PMI new**

Characteristic	Test method	Measuring unit	Value required	Value identified	Evaluation
Fabric PMI – new, without washing					
Antibacterial activity – antibacterial effect of the antibacterial treatment • inhibition zone • growth of bacteria	EN ISO 20645	mm	good antibacterial effect		
			> 1 /1-0 /0	9 ¹⁾	S
			> 1 /1-0 /0	8 ²⁾	S
			none ¹⁾ none ²⁾	none ¹⁾ none ²⁾	S S
					good antibacterial effect

Explanation: S – satisfy ¹⁾ – Gram positive bacterial strain ²⁾ – Gram negative bacterial strain

Reference material: **fabric PMS without washing** – produces strong growth of bacteria (fabric without antibacterial treatment, 100% polyester, white)

Tested bacteria: 1) Staphylococcus aureus (CCM 4516) - gram positive bacteria
2) Klebsiella pneumoniae (CNCTC 6120) - gram negative bacteria

Assessed parameters – **fabric PMI after 10 cycles of washing**

Characteristic	Test method	Measuring unit	Value required	Value identified	Evaluation
Fabric PMI – material after 10 cycles of washing 40 °C					
Antibacterial efficiency Antibacterial value A - significant - heavy	EN ISO 20743	-	$2 \leq A < 3$ $A \geq 3$	A = 5,15 ¹⁾ A = 4,64 ²⁾	S heavy antibacterial activity

Explanation: S – satisfy ¹⁾ – Gram positive bacterial strain ²⁾ – Gram negative bacterial strain

Reference material: **fabric PMS after 1 cycle of washing** – produces strong growth of bacteria (fabric without antibacterial treatment, 100% polyester, white)

Tested bacteria: 1) Staphylococcus aureus (CCM 4516) - gram positive bacteria
2) Klebsiella pneumoniae (CNCTC 6120) - gram negative bacteria

Assessed material – fabric PMI new and after 10 cycles of washing 40 °C **produces good antibacterial effect – heavy antibacterial activity.**
