

# FAQ

## Tailored Air Distribution

Question:

### Can I alter a fabric ducting system once installed?

Answer:

**Yes – fabric duct systems are inherently modular and designed for straightforward adjustments or extensions during commissioning and beyond.**

#### **/ Modular flexibility for post-installation changes**

Fabric duct sections zip and fasten together, allowing specific runs to be unzipped and modified without disturbing the entire system. Prihoda's adjustable duct model offers in-field length and diameter adjustments, ideal for projects where final dimensions emerge during fit-out.

#### **/ Simple replacement of components**

If you need to replace or extend a run, simply detach the affected module and swap in a new section. All alterations should be documented to ensure future maintenance or spare-part orders align with the updated configuration.

#### **/ Rapid support and custom parts**

Prihoda maintains a full range of spare modules and can quickly fabricate adjusted or bespoke sections. Whether extending service to new zones or accommodating layout changes, our technical team can supply precisely engineered replacements to match the original system's performance and aesthetics.

## Key terms:

modular design, adjustable ducts, zipped sections, in-field adjustment, spare modules, system documentation, custom fabrication, retrofit flexibility, commissioning, Prihoda support
