

FAQ

Tailored Air Distribution

Question:

Can you print on a fabric duct?

Answer:

Yes – from simple logos and solid colors to complex custom patterns, our Prihoda Art printing service delivers high-quality, durable graphics on fabric ducts.

/ Precision design and proofing

Using your vector graphic files, we create to-scale design proofs showing exactly how artwork will wrap each duct segment. This ensures accurate placement of logos, patterns, and colors before production.

/ Advanced digital printing on flame-retardant fabric

Prihoda's stable, smooth, flame-retardant polyester surface is ideal for digital dye-sublimation and direct-to-textile printing. The process embeds ink into the fibers, producing crisp images that resist fading, even after repeated washing and exposure to UV light.

/ Seamless integration and installation

Printed sections are cut and sewn to the exact duct dimensions, then zip together like our standard modules. Graphics align perfectly across seams, maintaining visual continuity on straight runs and curved profiles.

/ Showcasing completed projects

Our Prihoda Art portfolio includes hospitality venues, corporate interiors, and retail spaces – demonstrating vibrant color reproduction and precise pattern alignment. From brand-centric environments to decorative installations, printed fabric ducts transform HVAC elements into design features.
