Tailored Air Distribution

Air distribution that supports focus and productivity

Modern offices need more than furniture and lighting – they need healthy, comfortable air to help people perform at their best. Crowded workspaces, electronics and varied layouts can make the air feel heavy and distracting. Prihoda fabric ducting systems provide quiet, even airflow that supports focus, wellbeing and productivity throughout the workplace.

The challenge

Traditional ventilation often creates draughts, uneven temperatures and noisy airflow. In offices, this leads to discomfort, reduced concentration and higher energy use. Metal ducts are heavy, prone to condensation and difficult to clean, making them less suitable for flexible, modern work environments.

The solution

Prihoda textile ducts distribute air evenly and quietly, eliminating draughts and maintaining stable comfort. They are lightweight, hygienic and easy to maintain, with washable fabrics that stay corrosion-free. With colour and design options, fabric ducts also integrate smoothly into office interiors, supporting both function and aesthetics.

Why Prihoda?

Every office has different needs. Prihoda designs air distribution systems tailored to specific layouts and occupancy. Our Air Tailor software allows us to model airflow and guarantee performance before installation. With durable, recyclable fabrics, our systems combine long-term reliability, sustainability and low maintenance.:

Even air distribution
comfort across the entire office

Customisable design
colours and printing to match interiors

Quiet operation
reduces distractions and supports focus

Fast installation
easy and efficient to assemble and use

Hygienic
ducts can be easily washed or replaced

Energy efficiency
optimised airflow reduces HVAC demand

Trusted expertise

Prihoda has delivered fabric ducting solutions to offices and workspaces worldwide. From corporate headquarters to co-working hubs, our systems create healthier, more productive environments that improve comfort and support performance every day.

Compared to Metal Ducts

	Metal ducts	Fabric ducts
Weight	Heavy	Lightweight
Corrosion	High risk	Corrosion-free
Condensation	Frequent	Prevented
Maintenance	Complex, costly	Easy washing
Airflow	Uneven, draughts	Balanced, gentle
Noise	Turbulent, loud	Absorbed, quiet
Design freedom	Limited	Colours, shapes, prints
