

# Sports Facilities

Tailored Air Distribution

## Even airflow for athletes and spectators

Sports halls and arenas demand reliable ventilation. Large volumes of air must be moved efficiently to create conditions that are safe, comfortable and enjoyable for both athletes and spectators. Prihoda fabric ducting systems provide an effective, flexible and visually discreet solution for modern sports environments.

## The challenge

Sports facilities often feature high ceilings, varying occupancy levels and demanding indoor climates. Traditional metal ducts can create draughts, uneven air distribution, and high noise levels. They are also heavy, prone to corrosion and disruptive to install, making them less suitable for flexible or multi-purpose venues.

## The solution

Prihoda textile ducts ensure even airflow throughout large sports spaces, reducing draughts and improving comfort. They help control condensation in ice rinks or swimming halls, while quiet operation allows athletes to focus and spectators to enjoy the event without distraction. Lightweight and corrosion-free, they are quick to install and easy to maintain, with options for customised colours or printed designs to integrate with venue branding.

## Why Prihoda?

Each sports facility has its own unique requirements. Prihoda designs air distribution systems tailored to specific halls and arenas, using advanced Air Tailor software to simulate airflow and optimise solutions before installation. Our ducts are available in recyclable and washable fabrics, offering long-term reliability with low maintenance and environmental responsibility.:

### Even air distribution

stable comfort across large spaces

### Lightweight and corrosion-free

quick installation, long service life

### Quiet operation

supports concentration and spectator enjoyment

### Customisable

colours, logos or patterns to suit venue design

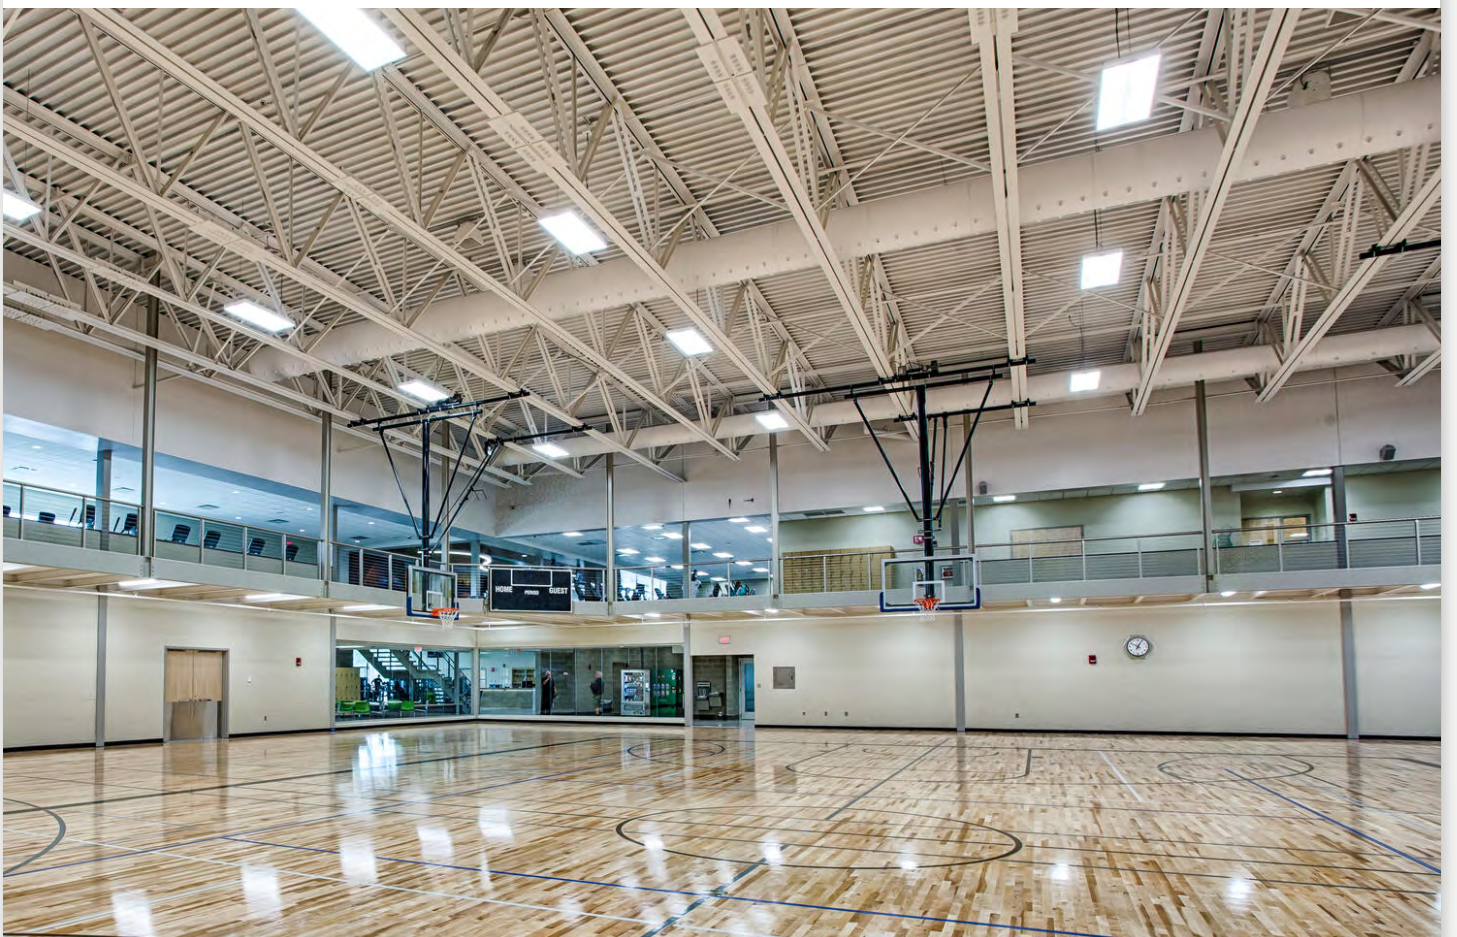

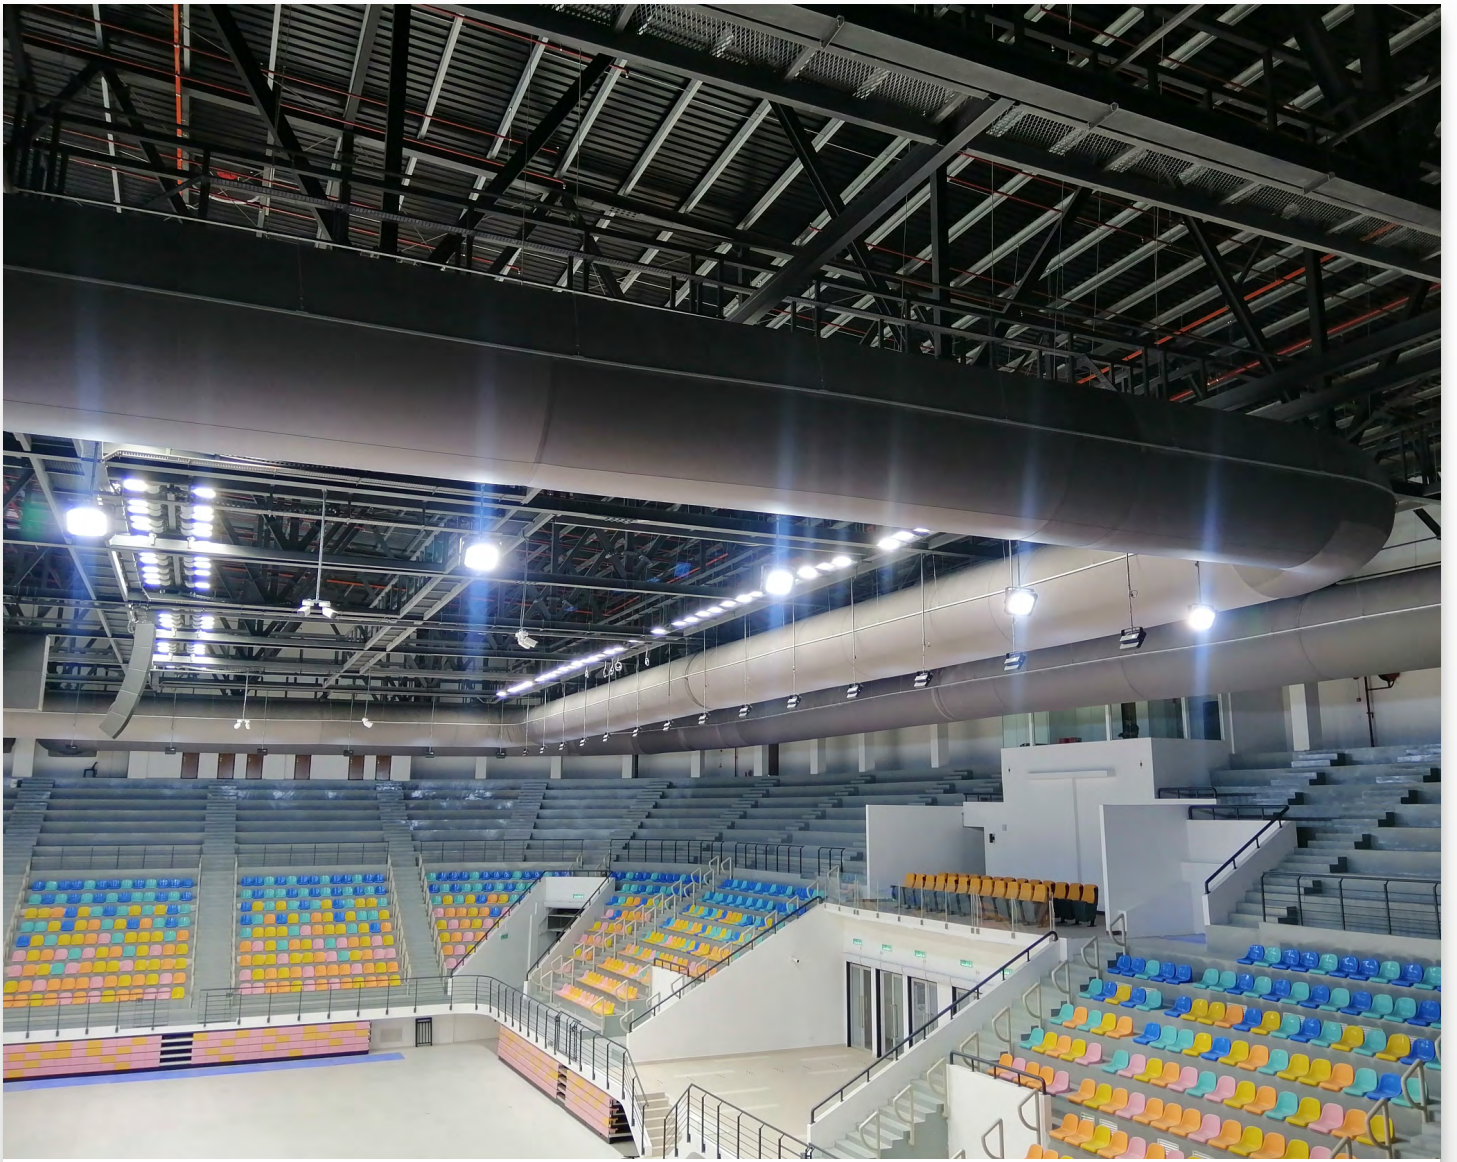

### Condensation control

prevents issues in ice rinks and pools

### Energy efficiency

optimised airflow reduces HVAC demand

## Trusted expertise

Prihoda has delivered fabric ducting solutions to sports facilities worldwide – from community gyms to large arenas. Our systems provide reliable air distribution that improves conditions, reduces operating costs and integrates seamlessly with the architecture of sporting venues.

## Compared to Metal Ducts

	<b>Metal ducts</b>	<b>Fabric ducts</b>
<b>Weight</b>	Heavy	Lightweight
<b>Corrosion</b>	High risk	Corrosion-free
<b>Condensation</b>	Frequent	Prevented
<b>Maintenance</b>	Complex, costly	Easy washing
<b>Airflow</b>	Uneven, draughts	Balanced, gentle
<b>Noise</b>	Turbulent, loud	Absorbed, quiet
<b>Design freedom</b>	Limited	Colours, shapes, prints

## // Take the next step //

Get in touch with us to discuss your sports facility project. We'll prepare a tailor-made airflow design for you.
